

American Network, Inc., Statement in connection with Domestic/International Long  
Distance Service

American Network Inc., ("ANI") headquartered in New York, at 142 East 39<sup>th</sup> Street, is a facilities-based Certified Local Exchange Carrier (CLEC) that offers data, voice and co-location services to business customers, including medium to large Internet service providers. We provide telecommunication products and innovative services not only at a low cost but with a superior service so that you can focus on your primary business and let us worry about addressing your communications needs.

ANI's revenues are reported in attached document marked confidential.

ANI is a facilities-based CLEC with only certification in New York. All of ANI's reporting requirements to the FCC are up-to-date (i.e., 499-A, 499-Q, etc...). ANI's presently does not have any interstate revenues to report; therefore we are up-to-date with the FCC Form 159-W. ANI Filer ID # 822280 and FRN – CORESID # 0004-2948-56.

ANI's network operation, a single point of contact for customers, is a 24-hour monitoring center located in Illinois at the operator service center. This gives our customers access to trained operators at any time of the day.

The Basic Inbound Business Line is directly connected to phones or modems within the office environment. To prevent a customer from encountering a busy signal when calling into your modem pool, your business line can be configured with a "Line Hunt" feature. "Line Hunt" will pass the call rapidly through a series of designated lines until it finds a free line.

ANI's Remote Access Service is ANI's modem rental service. ISPs can rent as few as 24 modems to as many as 10,000 ports at any one of our locations. This service is designed to eliminate the costly acquisition of modems and to save ISPs from expensive updates in modem technology. Ask one of our sales professionals about service and prices.

ANI has designed its central office with ample space for its customers to co-locate within a few feet from class 4/5 switches, thus eliminating costly local loop charges and adding additional reliability of being at the site.

Attachment B

American Network, Inc., total revenues for fiscal year 2001 amounts to \$86,500.
